

Reading 1A - Multiple Choice Question Bank

1. According to paragraph 1, what is the primary cause of urban heat islands?

- A. High concentration of dark surfaces such as asphalt
- B. Excessive agricultural irrigation in surrounding rural areas
- C. Seasonal variations in atmospheric ozone levels
- D. Underground geothermal activity near coastal cities

Answer: A

2. Which factor contributes most significantly to groundwater recharge rates?

- A. High rates of surface runoff during torrential rainstorms
- B. Permeability of soil layers and vegetation coverage
- C. Atmospheric humidity in arid mountain regions
- D. Sub-surface industrial water extraction

Answer: B

3. What percentage reduction in global carbon emissions is targeted for the next decade?

- A. 15 percent
- B. 30 percent
- C. 45 percent
- D. 60 percent

Answer: C

4. Based on the findings, how do mangrove forests protect coastal ecosystems?

- A. By raising sea levels in shallow lagoons
- B. By trapping sediment and buffering against wave energy
- C. By absorbing salt from ocean currents
- D. By converting saltwater into freshwater reserves

Answer: B

5. What primary methodology was utilized to measure solar radiation output?

- A. Satellite radiometry and ground-level sensors
- B. Manual thermal imaging from aircraft
- C. Deep ocean pressure gauge analysis
- D. Chemical isotope sampling of rainwater

Answer: A
