

VisaHouse LMS — Assessment Module Test Data

Complete ready-to-test QA sample datasets for **Reading**, **Listening**, and **Writing** modules. Built in compliance with the platform blueprints and UI validation constraints.

1. Reading Module (50 mins • 30 marks)

Specification: 5 Parts matching the LanguageCert Academic / IELTS reading structure.

Part 1A: Vocabulary & Synonyms in Context (Code: reading_1a • 6 questions • MCQ Single)

Instruction: Select the bold word in each sentence and choose the closest synonym.

#	Sentence / Question Prompt	Options (A, B, C, D)	Ans
1	The researchers noticed a marked increase in temperature.	A) subtle B) significant C) gradual D) sudden	B
2	The committee decided to defer the final evaluation until next term.	A) postpone B) cancel C) accelerate D) reject	A
3	Initial tests yielded inconclusive evidence regarding water purity.	A) definitive B) uncertain C) comprehensive D) unreliable	B
4	The company adopted a frugal approach to resource allocation.	A) wasteful B) generous C) economical D) reckless	C
5	The professor's lecture provided a lucid explanation of quantum theory.	A) clear B) confusing C) lengthy D) vague	A
6	Soil erosion has become an acute problem in the river basin.	A) minor B) severe C) temporary D) historical	B

Part 1B: Academic Cloze Passage (Code: reading_1b • 5 questions • 3 Options)

Shared Passage: Modern urban planning is undergoing a major shift. Cities are moving away from car-centric models to focus on sustainable mobility. By introducing bike corridors **{{blank:1}}**, planners aim to reduce congestion. This strategy has already **{{blank:2}}** positive results across several European capitals. However, critics argue that the required capital expenditure is **{{blank:3}}** high for smaller municipalities. To ensure lasting success, municipal authorities must **{{blank:4}}** with local communities before implementing drastic street redesigns. Ultimately, balanced transit systems remain **{{blank:5}}** to economic growth and climate resilience.

Gap	Option A	Option B	Option C	Ans
Gap 1	and pedestrian zones	but parking complexes	or highway lanes	A
Gap 2	generated	denied	forgotten	A

Gap 3	disproportionately	favorably	negligibly	A
Gap 4	consult	disagree	compete	A
Gap 5	essential	irrelevant	harmful	A

Part 2: Sentence Insertion / Cohesion (Code: reading_2 • 6 questions • Matching Unique A–H)

Shared Passage: Decision-making in scientific research requires rigorous methodology. **{{blank:1}}** In each case, researchers must balance innovation with safety protocols. When unexpected data surfaces, investigators first review their initial hypotheses. **{{blank:2}}** What they gain from peer review is objective clarity. Another important practice is documenting all preliminary anomalies. **{{blank:3}}** This habit prevents costly misinterpretations later in the study. Furthermore, ethical accountability cannot be compromised. **{{blank:4}}** Doing so maintains public confidence in academic institutions. Researchers must also consider long-term environmental impacts. **{{blank:5}}** Finally, once a study is complete, findings must be disseminated clearly to the broader public. **{{blank:6}}**

Option Bank:

- A: Before publishing, they consult external statisticians who inspect raw datasets.
- B: This discipline saves research teams from drawing flawed conclusions.
- C: Transparent disclosures strengthen credibility across the international community.
- D: Clear language bridges the gap between specialized labs and policymaking bodies.
- E: At every phase, experimental errors can invalidate years of careful work.
- F: Immediate root-cause analysis is essential whenever instruments show erratic readings.
- G: However, commercial pressure often leads to rushed trials and compromised data.
- H: Team leaders should also welcome constructive scrutiny during internal seminars.

Answer Mapping: Blank 1 → E | Blank 2 → A | Blank 3 → B | Blank 4 → C | Blank 5 → F | Blank 6 → D

Part 3: Multiple Text Matching (Code: reading_3 • 7 prompts • Texts A–D)

Texts Summary: **Text A:** Indigenous architectural cooling | **Text B:** Soil moisture sensors in agronomy | **Text C:** Vertical gardens and ambient urban cooling | **Text D:** Micro-hydro power in mountain streams.

Prompts & Answers:

- mentions the use of indigenous construction techniques? → A
- highlights automated technology for monitoring land conditions? → B
- describes a dual benefit for both temperature regulation and wildlife? → C
- details decentralized electricity production in elevated terrains? → D
- references historic building principles adapted for modern climates? → A
- evaluates agricultural strategies for conserving freshwater? → B
- explores plant installations on existing building facades? → C

Part 4: Academic Reading Comprehension (Code: reading_4 • 6 questions • MCQ Single)

Passage: The transition to circular economies represents more than recycling waste; it requires redesigning product lifecycles from the ground up. In traditional linear economies ('take, make, dispose'), virgin raw materials are extracted, consumed, and discarded. Circular systems prioritize durability, modular repair, and closed loops. Consumer reluctance to adopt product-leasing models rather than outright ownership remains the main behavioral hurdle. Long term, economic gains consistently exceed upfront conversion costs.

#	Question Prompt	Options	Ans
1	What is the core thesis regarding circular economies?	A) Solely sorting waste B) Fundamental redesign of production C) Cheaper initial set up D) Free materials	B

2	What characterizes the traditional linear model?	A) Continuous recovery B) Take, make, dispose workflow C) Product leasing D) Zero waste	B
3	Why is the linear model unsustainable?	A) Virgin resource depletion B) Lack of workers C) High export taxes D) Shipping delays	A
4	Which product attributes are prioritized in circular systems?	A) Rapid obsolescence B) Durability and modularity C) Single-use packaging D) High turnover	B
5	What is the main behavioral obstacle identified?	A) Fossil subsidies B) Preference for ownership over leasing C) Lack of engineers D) Tariff wars	B
6	What does the author conclude regarding long-term costs?	A) Inevitable bankruptcy B) Long-term benefits outweigh capital outlays C) Permanent losses D) Unchanged costs	B

2. Listening Module (35 mins • 26 marks)

Specification: 4 Parts with dialogue completions, academic conversation pairs, notepad gaps, and lecture comprehension.

Part 1: Dialogue Completions (Code: listening_1 • 7 questions • 3 Options)

#	Dialogue / Prompt	Option A	Option B	Option C	Ans
1	Dialogue 1	Yes, office closes at 5.	Train leaves at 9.	Room 402 is open.	A
2	Dialogue 2	If you submitted draft.	Library was full.	We meet after tutorial.	C
3	Dialogue 3	I uploaded lab report.	Deadline extended.	She graduated early.	B
4	Dialogue 4	Turn left past science lab.	Takes 15 minutes.	Morning session only.	A
5	Dialogue 5	I prefer pencil.	Data analysis incomplete.	All authors agreed.	B
6	Dialogue 6	Register on portal.	Delivered by mail.	Chemistry is major.	A
7	Dialogue 7	Let me check if Dr available.	Book returned yesterday.	Semester ends June.	A

Part 2: Academic Conversations (Code: listening_2 • 5 Conversations × 2 Questions = 10 Questions)

Conv	#	Question Prompt	Option A	Option B	Option C	Ans
1	1	Why meet advisor?	Change electives	Extend scholarship	Dispute grade	A
1	2	What should student do?	Consult dean	Submit waiver form	Attend seminar	B
2	3	Equipment problem?	Software outdated	Power disconnected	Sensor faulty	C
2	4	When is replacement?	This afternoon	Tomorrow morning	Next Monday	B
3	5	Research topic?	Geothermal heating	Storm-water runoff	Mangrove habitats	B
3	6	Recommended resource?	Municipal white paper	Textbook chapter	Archival article	A
4	7	Internship location?	Environmental NGO	Hospital laboratory	Tech company	A
4	8	Required prerequisite?	Statistics 301	Fieldwork certificate	Organic Chem II	B
5	9	Purpose of group meeting?	Prepare slide deck	Review mock exam	Divide chapters	A
5	10	Who designs charts?	Sarah	David	Elena	B

Part 3: Lecture Note Completion (Code: listening_3 • 7 Gaps • Max 3 Words)

Notepad Passage:

- Primary driver of deep water movement: differences in water **{{blank:1}}**
- Upwelling zones provide nutrient-rich: **{{blank:2}}**
- Key organism supporting Antarctic food web: **{{blank:3}}**
- Main threat to coral reef calcification: increased ocean **{{blank:4}}**
- Satellite technology tracks variations in: sea surface **{{blank:5}}**
- Average migration speed of tagged whales: approximately **{{blank:6}}** km per day
- Next week's seminar topic: preservation of **{{blank:7}}**

Accepted Answers: 1: density / salinity and temperature | 2: coastal waters / phytoplankton blooms | 3: krill / antarctic krill | 4: acidification / acidity | 5: temperatures / temperature | 6: 120 / 120 to 150 | 7: kelp forests / coastal wetlands

Part 4: Academic Lecture (Code: listening_4 • 6 questions • MCQ Single)

Lecture Topic: GIS Mapping and Spatial Epidemiology.

Questions & Answers:

1. Primary focus of lecture? → **B) How satellite GIS transforms urban epidemiology**
2. How did John Snow track cholera in London? → **A) Using spatial mapping of water pumps**
3. Modern GIS advantage? → **A) Real-time demographic data integration**
4. Why are heat maps effective? → **B) They quickly visualize infection clusters**
5. Ethical concern emphasized? → **A) Location privacy of individual patients**
6. Workshop activity for tomorrow? → **A) Vector breeding data from malaria zones**

3. Writing Module (60 mins • 2 Tasks • 64 Marks)

Specification: 2 Tasks assessed via 4 rubrics (Task Achievement, Grammar, Vocabulary, Organisation).

Task 1: Academic Report (Code: writing_1 • 150–200 Words • Weight: 40%)

Prompt / Context:

You have reviewed a study conducted on university campus energy consumption across three faculties (Engineering, Arts, and Business) over a 12-month period. The data highlights that Engineering consumed 55% of total power (primarily due to overnight laboratory computing), while Arts and Business used 25% and 20% respectively.

Instructions for Candidate:

Write a formal report for the University Sustainability Board in **150–200 words**:

1. Summarize the main trends and disparities in energy usage among the faculties.
2. Propose two realistic efficiency measures to reduce overnight power wastage.

Task 2: Discursive Academic Essay (Code: writing_2 • Min 250 Words • Weight: 60%)

Prompt / Context:

'As artificial intelligence tools become integrated into higher education, some educators argue that traditional closed-book examinations should be replaced entirely by project-based assessments and open-book evaluations. Others believe formal timed exams remain essential for evaluating individual student competence.'

Instructions for Candidate:

Write an academic essay of **at least 250 words**:

- Discuss both points of view.
- Give your own opinion with relevant examples and academic reasoning.
- Propose how universities can maintain assessment integrity while embracing technological innovation.

Standard Writing Rubric (Applied to both Task 1 & Task 2):

Criterion	Max Marks	Assessment Focus
Task Achievement	8 marks	How fully the response addresses the task and meets the word requirement.
Grammar	8 marks	Range, appropriacy, and syntactic accuracy for the CEFR / academic level.
Vocabulary	8 marks	Lexical resource, academic register, collocation accuracy, and spelling.
Organisation	8 marks	Coherent progression of ideas, paragraphing, and accurate discourse markers.
